MSME-BIOS Test Plan

Tester 1: Accounts, Onboarding, Plans, Payments, Dashboard and Data Isolation

1. About this test

MSME-BIOS is a web platform for small Indian businesses. An owner signs up, sets up the business, picks and pays for a plan, uploads bank statements, invoices and handwritten bills, and the system reads them into organised records. The owner can also invite staff into departments (Finance, Sales, HR, Marketing), and each person sees only their own department's work.

You are testing the part that is already built. Your job is to use it like a real customer, try to break it, and write down exactly what you find. This document is Tester 1's half. Tester 2 has a separate document covering document upload, saved documents, team invitations and roles. Together the two documents cover everything built so far.

What is NOT part of this test

- Dashboard features marked Coming soon (cash dashboard, P&L, aging, forecasting and so on). They are not built yet. Only check that the Coming soon pages open without errors.
- Real payments. Checkout uses a pretend (mock) payment window. No real money moves, so never enter real card or bank details anywhere.
- Real emails. Invitations are not emailed yet; the owner copies a link.

2. Ground rules

- Test on the live website: https://msme-bios.vercel.app. Use Google Chrome unless a test says otherwise. If time allows, repeat tests A-07, A-10, A-20 and A-34 in Edge or Firefox.
- The site sleeps when unused. The first page load after a long gap can take up to a minute. Wait for it and note the time; do not report that as a bug unless it takes longer than 2 minutes.
- You will create several test accounts. Use your own email with a plus tag, for example yourname+a1@gmail.com, yourname+a2@gmail.com. These all arrive in your normal inbox. Keep a list of every email and password you use in a private note, not in this document.
- Name every test business starting with TEST_ (example: TEST_Aman Traders) so Parth can find and delete them later.
- Use only fake or sample data. The sample files (one bank statement PDF, one invoice PDF, one handwritten bill image) will be shared by Parth.
- Do not share the live link or your test logins outside the team.

Known items (not new problems)

- On the dashboard, the Sales, Expenses and Profit numbers are placeholders. Only the documents count is real.
- All dashboard features except document upload show a Coming soon page.
- The handwritten bill reader is basic and may miss some items. That is expected; only report crashes or wrong error messages.
- Hindi and Marathi text was drafted with AI and has not been reviewed by a native speaker. Awkward or wrong wording is worth noting with a suggested replacement.
- At narrow widths (about 800 px) the logo box in the top bar of the dashboard may look like an empty white pill. Check it in test A-46; it is already on Parth's list.
- Invitation links last 7 days, so expiry cannot be tested now.

3. Preparation

You will need these before starting. Create them as the tests ask; this table is only so you can plan.

Account	How to create	Used in
Account P (paid)	Sign up with email, create business TEST_P, choose any plan, complete the mock payment successfully.	Billing, dashboard, isolation tests.
Account Q (paid)	Same as P but with a different email and business TEST_Q. Use a different browser or an Incognito window.	Isolation tests, session and switching tests.
Account R (unpaid)	Sign up, finish business setup, choose a plan, but do NOT complete payment.	Failed payment and paywall tests.
Google account	Any Google account you are happy to use for testing.	Google sign-in tests.
Sample files	From Parth: 1 bank statement PDF, 1 invoice PDF, 1 handwritten bill image.	Dashboard count and isolation tests.

4. Tests

4.1 First look: landing page, language and theme

ID	What to test and exact steps	Expected result
A-01	**Landing page loads** 1. Open https://msme-bios.vercel.app in a new Incognito window. 2. Wait for the page to load. Note how long the first load took. 3. Scroll from top to bottom slowly. 4. Click every button and link in the top bar and on the page (Log in, Create an account, guide and so on), then come back each time.	Page loads fully with no blank areas, broken images or cut-off text. The logo is visible. Every link or button opens a real page. No red error screen.
A-02	**Switch the language to Hindi** 1. On the landing page, click the language button in the top bar and choose Hindi. 2. Scroll the whole page.	All normal text is in Hindi. GST, GSTIN, PDF, MSME and OCR may stay in English letters. Hindi letters look clean (not boxes or broken shapes). No text is cut off or overlapping. Write down any English sentence that was left untranslated.
A-03	**Switch the language to Marathi** 1. Click the language button and choose Marathi. 2. Scroll the whole page.	Same expectations as the Hindi test, in Marathi.
A-04	**Language is remembered** 1. Choose Marathi. 2. Press F5 to refresh. 3. Open the Login page, then the Sign up page. 4. Close the tab, open the site again in the same browser.	The language stays Marathi on refresh and on every page. After reopening, it still remembers Marathi.
A-05	**Light and dark theme** 1. Use the theme switch in the top bar to move between light and dark. 2. Do this on the landing page, Login page and Sign up page.	Every piece of text is easy to read in both themes. The logo always sits on a white box and is readable. No page has a bright white block in dark mode or a black block in light mode. Selected text (drag over some text) shows an orange highlight.

ID	What to test and exact steps	Expected result
A-06	**Phone-size screen** 1. In Chrome press F12, then the device icon (top left of the developer panel), and choose a phone such as iPhone 12. Or use your real phone. 2. Open the landing page, Login and Sign up.	No sideways scrolling. Buttons are big enough to tap and not overlapping. The top bar and language/theme buttons still work.

4.2 Sign up, log in and log out

ID	What to test and exact steps	Expected result
A-07	**Sign up with a valid email (Account P)** 1. Open the Sign up page (Create Account). 2. Enter a name, a new email (for example yourname+a1@gmail.com) and a password of at least 6 characters, typed identically in both password boxes. 3. Click Create Account.	Account is created. You are taken to the Business Setup page.
A-08	**Sign up form checks** 1. On the Sign up page try each case separately: (a) leave everything blank, (b) email without an @ sign, (c) password with only 5 characters, (d) Confirm Password different from Password, (e) Full Name blank. 2. Click Create Account each time.	Each case shows a clear message and no account is created. Messages are understandable and appear near the problem or at the top of the form.
A-09	**Sign up with an email that already exists** 1. Log out if needed. 2. On the Sign up page use the same email you used in A-07 with any password.	A clear message says the email is already registered. No crash, and no second account.
A-10	**Log out and log in again** 1. While logged in, find the logout option (usually in the top bar or a profile menu) and click it. 2. On the Login page enter the email and password from A-07. 3. Click Log in to Dashboard.	Logout returns you to a public page. Login works. You land on Business Setup if you never finished it, or the dashboard if your setup and payment are done.
A-11	**Wrong password** 1. On the Login page enter a valid email and a wrong password. 2. Click Log in.	A clear error such as wrong email or password. You stay on the Login page and can try again.
A-12	**Email that has no account** 1. On the Login page enter an email you never registered, any password.	A clear error, no crash, and no account is created.

ID	What to test and exact steps	Expected result
A-13	**Show and hide password** 1. Click the eye icon in the password box on Login. 2. Do the same for both password boxes on Sign up.	The password becomes visible and hidden again each time.
A-14	**Remember me** 1. On the Login page tick Remember me and log in. 2. Close the whole browser, open it again and go to the site. 3. Repeat with Remember me unticked (log in again first).	Record what happens in each case (still logged in or logged out). There is no wrong answer; report anything that looks inconsistent or broken.
A-15	**Google sign-in with a new account** 1. Log out. On the Sign up page click Continue with Google. 2. Pick a Google account that has never been used on this site.	The Google window opens and closes normally. You are logged in and taken to Business Setup.
A-16	**Google sign-in with an existing account** 1. Log out. 2. On the Login page click Continue with Google and choose the account used in A-15. 3. Do this once after finishing business setup and payment, and once before.	You are logged in and land on the correct next step (not Business Setup again if it is already done).
A-17	**Cancel the Google window** 1. Click Continue with Google. 2. Close the Google window without choosing an account.	A calm message appears and may show an Error code starting with auth/. The page keeps working and you can try again. Note the error code shown.
A-18	**Private pages when logged out** 1. Log out completely. 2. In the address bar type the site address followed by /dashboard and press Enter. Repeat for /billing and /team.	You are sent to the Login page each time. No private information is shown, not even for a moment.
A-19	**Login page when already logged in** 1. Log in. 2. In the address bar go to /login and then /signup.	You are moved away to the app and do not see the login form.
A-20	**Refresh keeps you where you are** 1. Log in with a fully set up account (one that has paid). If no account has paid yet, come back to this test after A-34. 2. On the dashboard press F5 three times. 3. Open another dashboard page and press F5 there.	You stay on the same page each time. You are never sent to Business Setup (this was a bug that was fixed; confirm it stays fixed).

ID	What to test and exact steps	Expected result
A-21	**Same account in a new browser (Incognito)** 1. Open an Incognito window. 2. Log in with the same account as A-20. 3. Compare your business name and plan with the normal window.	You go straight to the dashboard, not Business Setup. Business name, plan and details are identical.
A-22	**Login and Sign up in Hindi and Marathi** 1. Set language to Hindi, then Marathi. 2. On the Login page try a wrong password. On the Sign up page trigger two validation errors.	Labels, buttons and error messages are all translated. Layout stays tidy.

4.3 Business setup

ID	What to test and exact steps	Expected result
A-23	**Save valid business details** 1. Log in with a new account that has not set up a business. 2. Fill every field with fake data. Name the business TEST_yourname Traders. Choose values from each dropdown. 3. Click the save or continue button.	Details are saved. You move on to the plan selection page.
A-24	**Business setup checks** 1. On a fresh account leave each required field empty one at a time and try to continue. 2. Type an invalid GSTIN such as 123. 3. Type letters in any number-only field.	Required fields block you with a clear message. Note whether an invalid GSTIN is rejected. Record which fields are required and what message you saw.
A-25	**Dropdowns in Marathi** 1. Switch the language to Marathi. 2. Open the business type and turnover dropdowns and choose a value in each. 3. Save. Switch the language back to English.	Dropdown choices are readable in Marathi and save without error. After switching back the details still display correctly.
A-26	**Details are kept** 1. After saving, press F5. 2. Use the browser Back button, then Forward. 3. Log out and log in again.	You are never sent in a loop back to Business Setup once it is saved. No data is lost, and no error appears.

4.4 Plans and pricing

ID	What to test and exact steps	Expected result
A-27	**All four plans are shown** 1. On the plan selection page look at every plan. 2. Note down the name, price, number of seats and features of each plan.	Four plans: Starter, Growth, Intelligence, Full suite. Included seats should be 2, 4, 6 and 10 in that order. Every plan shows a price and no field says undefined or is empty.
A-28	**Choose a plan and see the summary** 1. Click a plan. 2. On the summary page check the plan name, feature list, seats and price against the plan card.	Everything on the summary matches the plan you chose.
A-29	**Custom plan builder** 1. Open the custom plan option. 2. Tick features one by one and watch the price. 3. Untick everything, then try to continue. 4. Tick a few features and continue.	The price changes correctly each time. The behaviour with zero features is sensible (record what happens). The summary shows your chosen features and 2 included seats.
A-30	**Extra seats** 1. On the summary page use the seat control to add extra seats. 2. Test 0, 1, 5 and 20 extra seats. Try to go to 21. Try to go below 0. 3. Each extra seat should cost Rs 499 per month. Calculate by hand: plan price + (extra seats x 499) and compare with the total shown.	Total always equals plan price + extra seats x 499. You cannot go below 0 or above 20 extra seats. The seat count shown matches included seats + extra seats.
A-31	**Same price everywhere** 1. Write down the final price at: plan card, summary page, checkout page, and (after buying) the Billing page.	The price and seat count are identical at all four places.
A-32	**Plan pages in Hindi and Marathi** 1. Switch the language and revisit the plan page, summary and custom builder.	Plan names, feature names and descriptions are translated. Nothing overflows its box.
A-33	**Back and forward in the plan flow** 1. Go plan page > summary > back > choose a different plan > summary. 2. Use browser Back and Forward several times.	The summary always shows the plan you chose last (no stale plan or price). No crash or blank screen.

4.5 Checkout and mock payment

This uses a pretend payment window. No real money moves. Never enter real card details.

ID	What to test and exact steps	Expected result
A-34	**Successful payment** 1. With a new account (Account P) finish business setup, choose a plan, and go to checkout. 2. Complete the payment using the success option of the pretend payment window.	A success screen appears. You can continue to the dashboard and the plan is active. The upload page is now usable.
A-35	**Failed payment (Account R)** 1. With another new account go to checkout. 2. Make the payment fail using the failure option of the pretend window.	A clear failure message appears with a way to retry. The plan is NOT active. Trying to upload a document is blocked with a message asking for payment.
A-36	**Retry after failure** 1. On Account R after A-35, use the retry option and pay successfully.	Payment succeeds and the plan becomes active. Upload now works.
A-37	**Double click and refresh** 1. With a new account at checkout, click the pay button twice quickly. 2. In another new account refresh the page in the middle of paying.	Only one subscription is created. The Billing page shows one plan. No crash. Record exactly what you saw.
A-38	**Buying again while the plan is active** 1. With a paid account type /checkout in the address bar. 2. Also try choosing another plan from the plan pages (if reachable).	The app stops you with a friendly message. No second charge and the plan stays unchanged.
A-39	**Unpaid account is blocked** 1. Log in with an account that finished plan selection but never paid. 2. Try to open the upload page and upload a sample file.	The app asks you to complete payment. No document is processed.
A-40	**Checkout in Hindi, Marathi and dark mode** 1. Open the checkout, success and failure screens in each language and in dark mode.	All text is translated and readable; layout is clean.

4.6 Billing page

ID	What to test and exact steps	Expected result
A-41	**Billing shows the purchased plan** 1. With Account P open Billing from the left menu (or go to /billing). 2. Compare the plan name, features, seats, price and status with what you bought.	All details match your purchase and the status shows active. The page is read-only (no edit or cancel buttons).
A-42	**Billing in Hindi, Marathi and dark mode** 1. Switch language and theme on the Billing page.	Everything is translated and readable.

4.7 Dashboard

ID	What to test and exact steps	Expected result
A-43	**Greeting and business details** 1. Open the dashboard. 2. Check the greeting for the current time of day (morning, afternoon or evening). 3. Check that your name, business name and plan name are correct.	Greeting matches the time of day. Name, business and plan are correct.
A-44	**Left menu** 1. Note down every item in the left menu. 2. Click each item. 3. Click the highlighted item again.	Every item opens without an error page. Not-yet-built features show a Coming soon page. The item you are on is highlighted. The owner sees Team and Billing.
A-45	**Documents count** 1. Write down the documents count on the dashboard. 2. Upload one sample file (any one) from the Upload page. 3. Return to the dashboard and look at the count. 4. Try uploading a wrong file (such as a .txt file) and check the count again.	The count goes up by exactly 1 after a good upload. It does not change after a failed upload. (Sales, Expenses and Profit are placeholders; ignore them.)
A-46	**Narrow screen layout** 1. Make the browser window about 800 px wide, then about 400 px. 2. Look at the top bar and left menu.	Menu collapses or scrolls properly, no sideways scrolling. Look at the logo box in the top bar. If it is an empty white pill, that is the known issue.
A-47	**Dashboard in Hindi, Marathi and dark mode** 1. Switch language and theme on the dashboard and open two menu items.	Greeting, menu names, cards and Coming soon text are translated and readable.

4.8 MSME guide page

ID	What to test and exact steps	Expected result
A-48	**Guide opens and reads well** 1. Open the MSME guide from the top bar or the menu (or go to /msme-guide). 2. Try it logged out and logged in. 3. Read the page and click every link.	Page loads in both cases. Content is readable, with no broken layout. Links work.
A-49	**Guide in Hindi, Marathi and dark mode** 1. Switch language and theme on the guide page.	Translated and readable.

4.9 Data isolation between businesses

Use two paid accounts in two different browsers: Account P in the normal window and Account Q in Incognito (or another browser).

ID	What to test and exact steps	Expected result
A-50	**Each business sees only its own documents** 1. As Account P upload one sample document. 2. As Account Q (do not upload anything yet) open the dashboard and look at the documents count. 3. Then upload a different sample as Account Q and check both dashboards.	Q does not see P's document and the reverse. Counts are separate: P shows its own, Q shows its own.
A-51	**Opening another business's result link** 1. As Account P open a result page and copy its address (it ends with a long ID). 2. Paste that address into the Account Q window while logged in as Q. 3. Change one character of the ID in the address and try again.	Q sees a not found message, never P's data. No details appear, not even for a moment. No crash.
A-52	**Switching accounts in the same browser** 1. In one window log out of P and log in as Q. 2. Check business name, plan and documents count straight after logging in, and again after F5. 3. Log out of Q and log in as P again.	Each login shows only that account's business, plan and counts. No data from the previous account is visible at any point.
