MSME-BIOS Test Plan

Tester 2: Document Upload, Saved Documents, Team Invitations, Roles and Department Access

1. About this test

MSME-BIOS is a web platform for small Indian businesses. An owner signs up, sets up the business, picks and pays for a plan, uploads bank statements, invoices and handwritten bills, and the system reads them into organised records. The owner can also invite staff into departments (Finance, Sales, HR, Marketing), and each person sees only their own department's work.

You are testing the part that is already built. Your job is to use it like a real customer, try to break it, and write down exactly what you find. This document is Tester 2's half. Tester 1 has a separate document covering sign up, login, business setup, plans, payments, billing, dashboard and isolation between businesses. Together the two documents cover everything built so far.

Your half is the part with the most rules: reading documents, saving them, and who is allowed to see what. Take extra care with anything where a person sees something they should not.

What is NOT part of this test

- Dashboard features marked Coming soon (cash dashboard, P&L, aging, forecasting and so on). They are not built yet. Only check which menu items each role sees.
- Real payments. Checkout uses a pretend (mock) payment window. No real money moves, so never enter real card or bank details anywhere.
- Real emails. Invitations are not emailed yet; the owner copies a link and sends it to the invitee.

2. Ground rules

- Test on the live website: https://msme-bios.vercel.app. Use Google Chrome unless a test says otherwise.
- The site sleeps when unused. The first page load after a long gap can take up to a minute. Wait for it; do not report that as a bug unless it takes longer than 2 minutes.
- You need many accounts at the same time. Use your own email with a plus tag, for example yourname+b1@gmail.com, yourname+b2@gmail.com. All mail goes to your normal inbox. Keep a private note of every email and password; do not write them in this document.
- You also need several browser sessions open together. Use: Chrome normal window, Chrome Incognito window, a second Chrome profile, and Edge or Firefox. Label them in your note (for example Owner = Chrome normal, M1 = Incognito).
- Name every test business starting with TEST_ (example: TEST_Riya Traders) so Parth can find and delete them later.
- Use only the sample files from Parth (1 bank statement PDF, 1 invoice PDF, 1 handwritten bill image) plus junk files you create yourself for the error tests.
- Do not share the live link or your test logins outside the team.

Known items (not new problems)

- All dashboard features except document upload show a Coming soon page.
- The handwritten bill reader is basic and may miss some items. That is expected; only crashes or wrong error messages count as problems.
- Hindi and Marathi text was drafted with AI and has not been reviewed by a native speaker. Awkward or wrong wording is worth noting with a suggested replacement.
- Invitation links last 7 days, so expiry cannot be tested now. Skip it.
- Accepting an invitation does not require a verified email yet. A person with the link and the matching email can join. This is a known limitation.

3. Preparation

Create these accounts first. Setting them up carefully now saves time later. Business setup and payment steps are the same as a normal customer (use fake data, mock payment success).

Account	How to create	Used for
Owner X	Sign up, set up business TEST_X, choose the Full suite plan, and pay successfully with the mock payment. Full suite includes 10 seats.	Upload, saved documents, roles, member management, audit log.
Owner Y	Sign up, set up business TEST_Y, choose the Starter plan (2 seats), and pay successfully.	Seat limit tests.
Owner Z (unpaid)	Sign up, set up business TEST_Z, choose a plan, but stop before paying.	Paywall test.
Member M1	Just an email you control. Do not sign up yet. It will be invited as Finance.	Invitations and roles.
Member M2	Another email. It will be invited as HR.	Invitations and roles.
Member M3	Another email. It will be invited as Sales, later Marketing.	Invitations and roles.
Spare emails S1, S2	Two more emails for wrong-account and edge case tests.	Invitation edge cases.

Role rules you will check against (from the product design). A member sees only the items for their role that are also in the plan. Full suite includes everything, so you should see these exactly:

Role	Menu items that role should see (besides Dashboard)
Owner	Everything that was bought, plus Business Health Index, Team and Billing.
Finance	Document parser (upload), Cash dashboard, Receivables and payables, P&L, Aging, Cash flow simulator, Anomaly detection.
Sales	Invoice generator, Revenue concentration, Demand forecasting.
HR	Document parser (upload) only.
Marketing	Demand forecasting, Revenue concentration, WhatsApp alerts.
Any member	Never Team, Billing, plan pages, checkout or business setup.

4. Tests

4.1 Document upload and reading (use Owner X)

ID	What to test and exact steps	Expected result
B-01	**Upload page opens** 1. Log in as Owner X. 2. Open the document upload feature from the left menu. 3. Read all the text on the page.	The page loads with clear instructions. There is a way to choose a file and a way to choose the department. No error messages before you do anything.
B-02	**Bank statement is read correctly** 1. Upload the sample bank statement PDF. 2. Wait for the result page. 3. Compare the result with the PDF: check the first 5 and last 5 rows (date, description, debit or credit amount, balance). 4. Check the totals shown.	A result page opens with the transactions in the same order as the PDF. Dates and amounts match for the rows you checked. Totals add up to the PDF.
B-03	**Invoice is read correctly** 1. Upload the sample invoice PDF. 2. Compare the result with the invoice: invoice number, date, seller and buyer, GSTIN, every line item (quantity, rate, amount), tax and grand total.	All fields you checked match the invoice. Line items are in the same order and the total is correct.
B-04	**Handwritten bill** 1. Upload the handwritten bill image. 2. Count how many items are on the bill and how many the system found. 3. Note how many items were read out of the total (for example 4 of 10).	A result page opens without a crash. Reading only some items is expected. Wrong amounts or invented items are a real problem.
B-05	**Wrong file type** 1. Try to upload a .txt file, then a .docx file, then a .zip file.	Each is rejected with a clear, friendly message. No crash, no blank page, and nothing is saved.
B-06	**Wrong content, right file type** 1. Upload a PDF that is not a bank statement or invoice (for example a resume or a brochure). 2. Upload a photo that is not a bill (for example a photo of a person or a landscape).	A clear message says the document could not be read or is not supported. No crash, and nothing misleading is saved as a valid result.
B-07	**Empty or damaged file** 1. Create an empty file named test.pdf (0 KB) and try to upload it. 2. Rename a text file to damaged.pdf and upload it.	A friendly error appears. No crash, and nothing is saved.

ID	What to test and exact steps	Expected result
B-08	**Large file** 1. If you have a PDF of more than 10 MB, upload it. If you do not, skip this test.	Either it is processed, or a clear message says the file is too big. The page does not freeze forever.
B-09	**Waiting state and double click** 1. Upload a sample file and watch the page while it works. 2. Click the upload button twice quickly on another upload. 3. Afterwards check the documents count on the dashboard.	A loading indicator shows while the file is processed. Double clicking does not create two documents.
B-10	**Choosing the department** 1. As the owner upload a sample file once for each department in the department dropdown (Finance, Sales, HR, Marketing). 2. Open each result and check which department it shows.	Every department can be chosen. The result page shows the department you picked. The dropdown labels are readable.
B-11	**Same file twice** 1. Upload the same sample file two times.	Two separate documents are saved, each with its own result page. Record whether the system warns about a duplicate (no warning is also fine).
B-12	**Upload errors in Hindi and Marathi** 1. Switch the language to Marathi, upload a wrong file type, and read the error. 2. Repeat in Hindi.	The error title and message are translated. Layout is tidy.

4.2 Saved documents and result pages (use Owner X)

ID	What to test and exact steps	Expected result
B-13	**Result survives a refresh** 1. Upload a sample file and wait for the result page. 2. Press F5.	The same result is shown again (it is loaded from saved data). You are not sent to another page and no error appears.
B-14	**Result link in a new tab** 1. Copy the address of a result page. 2. Open it in a new tab and in a different browser window where you are logged in as the same owner.	The result opens correctly in both.
B-15	**Result link when logged out** 1. Copy the address of a result page. 2. Open it in an Incognito window where nobody is logged in.	You are sent to Login and no data is shown. Record what happens after you log in (back to the result or to the dashboard). Both are acceptable; report anything strange.

ID	What to test and exact steps	Expected result
B-16	**Made-up result address** 1. Log in as Owner X. 2. Go to /results/abc123 (replace the end of any real result address with abc123). 3. Also try /results/0 and /results/ with nothing after it.	A friendly not found message each time. No crash and no error code on screen.
B-17	**Documents count on the dashboard** 1. Note the count on the dashboard. 2. Upload a good file and check again. 3. Upload a bad file and check again.	Count increases by 1 for each good upload and not at all for a failed upload.
B-18	**Result page layout** 1. Open a bank statement result. 2. View it in dark mode, in Hindi, in Marathi, and at phone width (about 400 px).	Tables are readable; long tables scroll sideways inside their box rather than breaking the page. Text stays inside its boxes in every language and theme.

4.3 Paywall (use Owner Z, unpaid)

ID	What to test and exact steps	Expected result
B-19	**Unpaid account cannot upload** 1. Log in as Owner Z (business set up, plan chosen, not paid). 2. Try to open the upload page and upload a sample file. 3. Also try the Team page by typing /team in the address bar.	The app clearly asks you to complete payment before using the feature. No document is processed or saved. No crash.

4.4 Team: invitations (use Owner X; members M1, M2, M3)

Remember: invitation links are not emailed. The owner copies the link and you paste it into the member's browser yourself.

ID	What to test and exact steps	Expected result
B-20	**Team page** 1. Log in as Owner X. 2. Open Team from the left menu.	The page lists you as the owner. It shows a seat summary (used seats out of 10). There is a way to invite someone with their email and a role.

ID	What to test and exact steps	Expected result
B-21	**Create an invitation** 1. Enter M1's email and choose the Finance role. 2. Create the invitation. 3. Copy the link that appears. 4. Close the message, then look for the link again.	A link of the form .../invite/long-random-text is shown with a copy button. The invitation appears in a pending list. The full link is only shown once (after closing, you cannot see it again; that is intended).
B-22	**Open the link while logged out** 1. In an Incognito window (nobody logged in) paste the link.	A page previews the invitation (business name and role) and asks you to log in or sign up. No private data of the business is shown.
B-23	**Accept as a new account** 1. From the preview page sign up using M1's email (the email that was invited). 2. Complete sign up and see where you land. 3. Look at the dashboard, business name and left menu.	You return to the invitation and accept it. You join TEST_X as Finance and land on its dashboard. You do NOT get asked to set up your own business.
B-24	**Wrong email tries to accept** 1. Owner X invites M2's email as HR and copies the link. 2. Open that link in a browser logged in as S1 (a different email).	Acceptance is refused with a clear message that the email does not match. S1 does not join the business.
B-25	**Reuse an accepted link** 1. Let M2 accept the HR invitation correctly. 2. Open the same link again, as M2 and as someone else.	A clear message says the invitation was already used. No second membership and no crash.
B-26	**Revoke an invitation** 1. Owner X invites M3's email as Sales and copies the link. 2. Before M3 accepts, revoke the invitation on the Team page. 3. Open the link as M3.	The invitation disappears from the pending list and the seat is freed. Opening the link gives a clear message that it was cancelled.
B-27	**Invalid link** 1. Go to /invite/thisisnotarealtoken. 2. Go to /invite/ with nothing after it.	A clear friendly message that the link is not valid. No crash.
B-28	**Invitee already has an empty business** 1. Create account S1 by signing up only (do not set up any business). 2. Owner X invites S1's email as Marketing. 3. Log in as S1 and open the link.	S1 joins Owner X's business without trouble. S1 does not keep a separate business of their own.

ID	What to test and exact steps	Expected result
B-29	**Invitee already has a real business** 1. Create account S2, sign up and complete business setup with TEST_S2. 2. Owner X invites S2's email as Sales. 3. Log in as S2 and open the link.	S2 is not allowed to join and sees a clear message that they already have a business. S2's own business is untouched.
B-30	**Invited person signs up without using the link** 1. Owner X invites a new email (call it S3) as Sales, but do not give them the link. 2. Sign up with S3's email directly on the Sign up page. 3. Look at what the app shows.	The app shows a status screen about a pending invitation rather than creating a separate business. The screen text is clear about what to do next.
B-31	**Inviting the owner's own email** 1. On the Team page invite Owner X's own email.	It is refused with a clear message. No invitation is created.
B-32	**Inviting the same email twice** 1. Invite an email that already has a pending invitation (for example S3) a second time.	Record what happens. A clear message or a replaced link are both fine. A crash, a double seat count or a confusing result would be a problem.

4.5 Team: roles and department separation

Use Owner X (Full suite). Each person must be logged in in a different browser session. For the department tests, owner X should upload at least one document as Finance and one as Sales first.

ID	What to test and exact steps	Expected result
B-33	**Menu for each role** 1. Log in as M1 (Finance), M2 (HR) and the owner in separate sessions. 2. For each person note down the menu items they see. 3. Compare with the Role rules table in section 3.	Each role sees exactly the items listed for it. No member sees Team or Billing.
B-34	**Owner-only pages blocked for members** 1. Logged in as M1 type each address: /team, /billing, /checkout, /business-setup and any plan page address you know. 2. Do the same as M2.	The member is sent back to the dashboard each time. Nothing from the owner's pages is displayed, even briefly.

ID	What to test and exact steps	Expected result
B-35	**Finance sees only Finance documents** 1. As the owner upload one document with department Finance and one with Sales (if not already done). 2. As M1 (Finance) check the documents count on the dashboard. 3. Copy the address of the Sales document's result page from the owner's browser and open it as M1.	M1 can see the Finance document only. The Sales result page address gives a not found message, never the data.
B-36	**HR sees none of Finance or Sales documents** 1. As M2 (HR) look at the documents count. 2. Open the address of the Finance document's result page as M2.	M2 sees none of the Finance or Sales documents. Opening the address shows not found.
B-37	**Member uploads go to the member's own department** 1. As M1 (Finance) upload a sample file. 2. Check whether you were offered a department choice. 3. As the owner check the department shown on that document.	M1 cannot upload into another department (no choice, or it is forced to Finance). The document is saved under Finance.
B-38	**Owner sees everything, department colleagues share** 1. As the owner check the documents count after the uploads above. 2. Invite another person as Finance (reuse a spare email) and have them accept. 3. As that second Finance member check whether M1's upload is visible.	The owner's count includes all departments. Both Finance members see Finance documents; each department only sees its own. Nobody below the owner sees more than their own department.
B-39	**Members cannot see money details** 1. As a member open any page that could show plan price, seats purchased or payment status (menu, dashboard, address bar guesses).	Members never see the price, seats purchased or billing details.

4.6 Team: managing members, seats and activity log

ID	What to test and exact steps	Expected result
B-40	**Change a member's role** 1. As the owner change M1 from Finance to Sales. 2. Ask M1 to refresh (F5) or log out and in. 3. Check M1's menu and what documents M1 can see.	M1's menu changes to Sales items. M1 can now see Sales documents and no longer sees Finance documents. The Team page shows the new role.
B-41	**Deactivate a member** 1. As the owner deactivate M2. 2. In M2's browser refresh and try to open the dashboard and upload page.	M2 sees a clear status screen saying the access is deactivated. M2 cannot use the app. The owner's seat summary shows one seat freed.

ID	What to test and exact steps	Expected result
B-42	**Reactivate a member** 1. Reactivate M2 as the owner. 2. Ask M2 to refresh.	M2 regains access with the same role. The seat count goes up again.
B-43	**Seat limit (use Owner Y with 2 seats)** 1. Log in as Owner Y (Starter, 2 seats). The owner uses one seat. 2. Invite one email. The seats are now full (owner + 1 pending). 3. Try to invite a second email. 4. Revoke the first invitation, then invite the second email.	The second invitation is refused with a clear message that the seat limit is reached. After revoking, inviting works again. The seat summary always shows the right used and total seats.
B-44	**Reactivating when seats are full** 1. On Owner Y: let one invited member accept (seats full), then deactivate them and invite someone else who accepts. 2. Now try to reactivate the first member.	Reactivation is refused with a seat limit message. Nothing breaks and the seat summary stays correct.
B-45	**The owner is protected** 1. Look at the owner's own row on the Team page. 2. Try to change the owner's role or deactivate the owner (use the address bar or any control you can find).	There are no buttons to change or deactivate the owner. If you reach such an action it is refused with a clear message.
B-46	**Activity log for the owner** 1. As the owner open the activity log (audit) on the Team page. 2. Check that it lists: invitation created, invitation revoked, member joined, role changed, member deactivated, member reactivated.	Each action above appears with who did it and when. Entries are in a sensible order (newest first or oldest first, consistently).
B-47	**Activity log is not available to members** 1. As M1 try to open the Team page and any activity log address you can find.	Members are sent away and no log entries are shown.

4.7 Team screens in Hindi, Marathi and dark mode

ID	What to test and exact steps	Expected result
B-48	**Language and theme on team screens** 1. As the owner open the Team page, the invite creation, and the activity log in Hindi, Marathi and dark mode. 2. As an invitee open the invitation page and the Deactivated and Invitation pending status screens in each language and in dark mode. 3. Check role names (Finance, Sales, HR, Marketing) and department names.	Everything is translated and readable in both themes. Role and department names look consistent across the app. No text is cut off.
